

**SYSTEM FOR PROVIDING CONTINUITY OF A BROADCAST BETWEEN
CLIENTS AND METHOD THEREFOR**

Abstract of the Disclosure

5 A communication system (10) comprises a plurality of clients (12) including a
first client (18) and a second client (20). Within the communication system (10),
continuity of one or more of a plurality of broadcast events (14) is provided between
the plurality of clients (12). The first client (18) monitors a broadcast event (34).
Thereafter, the second client (20) launches monitoring of the broadcast event (34) in
10 response to an occurrence associated with the broadcast event (34).
